Effective Strategies for Network Troubleshooting and Repair Training Course

20 - 24 Apr 2026

Sharm El-Sheikh

4100 € (Per Person)

Ref: #NO3115_615154

Course Introduction / Overview:

This comprehensive training course is designed to provide IT professionals with the essential skills and strategies for effective network troubleshooting and repair. In any enterprise, network downtime can lead to significant financial losses and damage to reputation, making the ability to quickly and accurately diagnose and fix issues a critical skill. This course goes beyond basic command-line tools. It introduces a systematic approach to problem-solving, covering everything from foundational physical layer issues to complex application-layer problems. Participants will learn how to use advanced diagnostic tools, analyze network traffic, and develop a structured methodology for identifying the root cause of network failures. We will cover a wide range of topics including network performance analysis, WAN troubleshooting, and cloud network diagnostics. Drawing from the work of respected authors like Laura Chappell and her book "Wireshark Network Analysis," this program at BIG BEN Training Center provides a strong academic and practical foundation. By the end of this course, you will be equipped to handle complex network issues, minimize downtime, and ensure the reliability and performance of your organization's network infrastructure.

Target Audience / This training course is suitable for:

- Network engineers and administrators.
- IT support and help desk professionals.
- Cybersecurity analysts.
- System administrators.
- DevOps engineers.
- IT managers.
- Technical support specialists.

Target Sectors and Industries:

- Information Technology and software development.
- Telecommunications.
- Financial services.
- Manufacturing.
- Healthcare.
- Government agencies and equivalents.
- Retail and e-commerce.

Target Organizations Departments:

- IT and Network Operations.
- Technical Support.
- System Administration.
- Cybersecurity.
- Application Development.
- Infrastructure.
- Quality Assurance.

Course Offerings:

By the end of this course, the participants will have able to:

- Apply a systematic methodology to network troubleshooting.
- Utilize advanced network diagnostic tools and software.
- Analyze network traffic and packet captures to identify issues.
- Troubleshoot connectivity, performance, and security problems.
- Diagnose issues in complex WAN and cloud environments.
- Resolve common hardware and software-related network faults.
- Implement proactive monitoring to prevent future failures.

Course Methodology:

This training course at BIG BEN Training Center uses a hands-on, case-study-driven methodology. The learning experience combines instructor-led sessions with practical labs that simulate real-world network problems. Participants will work through a series of structured troubleshooting scenarios, from simple connectivity issues to complex routing and performance bottlenecks. The course encourages teamwork and collaborative problem-solving, allowing participants to discuss different approaches and learn from each other's experiences. The instructor will provide expert guidance, coaching participants on how to apply the learned methodologies effectively. This approach ensures that the skills gained are not just theoretical but are directly applicable to a professional setting, allowing participants to build confidence in their ability to quickly and efficiently resolve network issues.

Course Agenda (Course Units):

Unit One: The Troubleshooting Methodology

- Introduction to network troubleshooting.
- The seven-step troubleshooting model.
- Layer-by-layer troubleshooting (OSI model).
- Using foundational commands for diagnostics.
- Documenting network issues and solutions.
- Developing a troubleshooting plan.
- Case study: a DNS resolution problem.

Unit Two: Network Connectivity and Physical Layer

- Troubleshooting physical connections.
- Using tools like cable testers and network mappers.
- Diagnosing link state and duplex mismatch issues.
- Resolving IP addressing and DHCP problems.
- Common switch and router configuration errors.
- Packet loss and latency issues.
- Practical lab: diagnosing connectivity problems.

Unit Three: Routing, Switching, and Performance

- Troubleshooting routing issues.
- Using traceroute and ping effectively.
- Resolving VLAN and inter-VLAN routing problems.
- Diagnosing slow network performance.
- Analyzing network congestion.
- Understanding and troubleshooting common network protocols.
- Practical lab: troubleshooting routing and switching.

Unit Four: Advanced Diagnostics and Analysis

- Using packet analyzers like Wireshark.
- Analyzing network traffic for anomalies.
- Troubleshooting application-level protocols.
- Diagnosing issues in cloud and virtual networks.
- WAN troubleshooting techniques.
- Monitoring network performance with advanced tools.
- Case study: a packet analysis exercise.

Unit Five: Proactive Network Management & Security

- Developing a proactive network management strategy.
- Implementing network monitoring and alerting.
- Using baselines to identify performance issues.
- Troubleshooting security-related network problems.
- Diagnosing firewall and access control issues.
- Final project: a comprehensive troubleshooting scenario.
- The future of network troubleshooting.

FAQ:

Qualifications required for registering to this course?

There are no requirements.

How long is each daily session, and what is the total number of training hours for the course?

This training course spans five days, with daily sessions ranging between 4 to 5 hours, including breaks and interactive activities, bringing the total duration to 20 - 25 training hours.

Something to think about:

In an era of increasingly complex and distributed networks, how can IT professionals evolve from a reactive, fire-fighting approach to a proactive, predictive one in network troubleshooting and repair?

What unique qualities does this course offer compared to other courses?

This course provides a unique and structured approach to network troubleshooting that is not commonly found in general networking courses. It moves beyond a simple list of commands and focuses on teaching a systematic, methodical way of thinking that is applicable to any network environment. The curriculum is heavily hands-on. It uses a variety of labs and case studies that simulate the real-world pressures of diagnosing and resolving network issues under time constraints. The program also emphasizes the use of advanced tools like packet analyzers, which are essential for deep-level network analysis. This is not just a course about fixing things. It is about understanding the "why" behind network failures and implementing a strategy to prevent them. This program equips IT professionals with the critical thinking skills to become a true asset to any organization.
