Practical Computer-Aided Design for the Construction Industry Training Course

14 - 18 Dec 2026

Casablanca

4500 € (Per Person)

Ref: #CAD3165_266031

Course Introduction / Overview:

This training course is designed to equip construction professionals, engineers, and site supervisors with the strategic and technical skills needed to master Computer-Aided Design (CAD) in the construction industry. The ability to read, interpret, and create technical drawings is a critical factor for ensuring accuracy and collaboration on a project. This program, offered by BIG BEN Training Center, provides a comprehensive framework for understanding the core principles of CAD software, from various drawing tools and drafting techniques to 3D modeling and data management. We will explore key concepts such as BIM integration, blueprint reading, and the use of CAD standards. The curriculum is informed by the academic work of authors like Paul G. Smith, whose book, Technical Drawing for Engineers, provides a foundational and detailed understanding of the principles behind effective technical communication. This course goes beyond a simple overview of software to provide a deep understanding of how to implement real-world solutions that ensure design accuracy, operational efficiency, and project profitability. We prepare participants to be leaders who can build more efficient and innovative construction initiatives.

Target Audience / This training course is suitable for:

- Civil and structural engineers.
- Architects and designers.
- Site supervisors and foremen.
- Drafting technicians.
- Project coordinators.
- Contracts managers.
- Quality assurance personnel.
- Government agencies and equivalents.

Target Sectors and Industries:

- Construction.
- Architecture and Design.
- Engineering.
- Real Estate Development.
- Manufacturing.
- Utilities.
- Infrastructure.
- Government and public administration agencies.

Target Organizations Departments:

- Engineering.
- Project Management Office (PMO).
- Design and Drafting.
- Operations.
- Quality Assurance.
- Procurement.
- Strategic Planning.
- Research and Development.

Course Offerings:

By the end of this course, the participants will have able to:

- Apply core CAD skills for construction.
- Read and interpret blueprints and technical drawings.
- Utilize CAD software for 2D and 3D modeling.
- Manage CAD files and data effectively.
- Develop drafting techniques for accuracy.
- Integrate BIM data with CAD.
- Adhere to CAD standards and protocols.
- Create clear and precise construction documents.

Course Methodology:

This training course uses a highly practical and case-study driven methodology. The program is built on real-world examples of successful CAD applications in the construction field. Participants will work in teams to create and modify technical drawings for a hypothetical construction project, applying the tools and frameworks learned in the course. We will use interactive workshops to practice skills like 3D modeling and layer management. The curriculum is designed to be a collaborative experience where participants can share their unique challenges and innovative solutions. Our trainers, with extensive experience in the field, will provide direct feedback and guidance throughout the course. BIG BEN Training Center is committed to providing a dynamic and practical learning environment, ensuring that participants leave with the skills and confidence to effectively use CAD in the construction industry.

Course Agenda (Course Units):

Unit One: Foundations of CAD in Construction

- Introduction to CAD software.
- Understanding 2D and 3D drafting.
- The role of CAD in the project lifecycle.
- Basic drawing tools and commands.
- Working with layers and blocks.
- Case studies in CAD applications.
- The importance of blueprint reading.

Unit Two: 2D Drafting and Plan Creation

- Creating accurate 2D plans.
- Using dimensions and annotations.
- Drafting techniques for details.
- Creating floor plans and sections.
- Plotting and printing drawings.
- Adhering to drafting standards.
- Ensuring consistency in drawings.

Unit Three: Advanced Drafting and 3D Modeling.

- Introduction to 3D modeling.
- Creating complex shapes and forms.
- Working with surfaces and solids.
- Rendering and visualization.
- BIM integration basics.
- Converting 2D to 3D.
- Understanding different file formats.

Unit Four: Data Management and Collaboration

- Managing CAD files and data.
- Using metadata and attributes.
- Collaborating on shared drawings.
- Version control.
- Data security for design files.
- The role of cloud storage.
- Integrating with other software.

Unit Five: Strategic Application and Industry Trends

- Implementing CAD standards.
- Workflow optimization.
- The future of CAD technology.
- BIM integration in practice.
- Career pathways for CAD specialists.
- Strategic leadership for technical teams.
- The impact of technology on design.

FAQ:

Qualifications required for registering to this course?

There are no requirements.

How long is each daily session, and what is the total number of training hours for the course?

This training course spans five days, with daily sessions ranging between 4 to 5 hours, including breaks and interactive activities, bringing the total duration to 20 - 25 training hours.

Something to think about:

How can a deeper understanding of practical CAD skills and a proactive approach to data management empower construction professionals to move beyond traditional methods and become strategic leaders in creating more accurate, efficient, and collaborative projects?

What unique qualities does this course offer compared to other courses?

This training course is unique because it provides a dedicated, strategic focus on practical CAD skills for the construction industry. While other programs may cover general software use, our curriculum is designed to empower professionals with the specific skills needed to address the unique challenges of technical documentation in construction, from managing CAD files to integrating BIM data. The program is a hands-on experience, with exercises that directly simulate the challenges and decisions involved in a real-world drafting scenario. We go beyond theoretical concepts to provide a clear, actionable roadmap for balancing the demands of a complex project with the imperative of delivering a successful and well-documented outcome. This course is for professionals who want to lead their organizations toward a more efficient, profitable, and innovative future.
