Civil 3D for Infrastructure Projects Training Course

18 - 22 Oct 2026

Amman

3800 € (Per Person)

Ref: #CAD7618_214654

Course Introduction / Overview:

This training course is designed to equip civil engineers, surveyors, and infrastructure professionals with the strategic and technical skills needed to master Civil 3D for infrastructure projects. The ability to design and manage complex projects with accuracy is a critical driver for improving efficiency, safety, and project delivery. This program, offered by BIG BEN Training Center, provides a comprehensive framework for understanding the core principles of BIM for infrastructure, from various site grading and roadway design techniques to land surveying and utility network management. We will explore key concepts such as surface modeling, corridor modeling, and the use of BIM collaboration tools. The curriculum is informed by the academic work of authors like Hyoung-Joo Kim and Yong-Hoon Kim, whose book, BIM and Data Management in Construction, provides a foundational and detailed understanding of the principles behind effective data-driven design in civil engineering. This course goes beyond a simple overview of software to provide a deep understanding of how to implement real-world solutions that ensure design accuracy, operational efficiency, and project profitability. We prepare participants to be leaders who can build more efficient and innovative infrastructure initiatives.

Target Audience / This training course is suitable for:

- Civil engineers.
- Surveyors and land planners.
- Infrastructure project managers.
- Urban planners.
- GIS specialists.
- Construction managers.
- Consulting engineers.
- Government agencies and equivalents.

Target Sectors and Industries:

- Civil Engineering.
- Infrastructure and Public Works.
- Land Development.
- Construction.
- Surveying and Mapping.
- Transportation.
- Utilities.
- Government and public administration agencies.

Target Organizations Departments:

- Civil Engineering.
- Surveying.
- Project Management.
- Public Works.
- Urban Planning.
- Construction.
- GIS.
- Strategic Planning.

Course Offerings:

By the end of this course, the participants will have able to:

- Apply core Civil 3D principles.
- Master site grading techniques.
- Perform corridor modeling for roadways.
- Utilize surface modeling for terrain analysis.
- Integrate land surveying data.
- Ensure BIM collaboration on projects.
- Manage and design utility networks.
- Produce professional design drawings.

Course Methodology:

This training course uses a highly practical and case-study driven methodology. The program is built on real-world examples of successful infrastructure projects. Participants will work in teams to design a small road or site development project, applying the tools and frameworks learned in the course. We will use interactive workshops to practice skills like creating a surface model and designing a roadway corridor. The curriculum is designed to be a collaborative experience where participants can share their unique challenges and innovative solutions. Our trainers, with extensive experience in the field, will provide direct feedback and guidance throughout the course. BIG BEN Training Center is committed to providing a dynamic and practical learning environment, ensuring that participants leave with the skills and confidence to effectively perform Civil 3D tasks.

Course Agenda (Course Units):

Unit One: Foundations of Civil 3D

- The role of Civil 3D in infrastructure projects.
- Understanding the BIM for infrastructure concept.
- Introduction to the software interface.
- The importance of surface modeling.
- Case studies in civil engineering.
- The value of a structured approach.
- Project setup and data import.

Unit Two: Terrain and Site Modeling

- Creating a surface model from various data.
- Editing and analyzing terrain.
- Performing cut and fill calculations.
- Mastering site grading techniques.
- Working with grading objects.
- Creating and using alignment and profiles.
- The role of land surveying data.

Unit Three: Corridor Modeling and Roadway Design

- The principles of corridor modeling.
- Designing a roadway corridor.
- Working with assemblies and subassemblies.
- Creating and editing a feature line.
- Generating cross sections.
- Calculating material quantities.
- Ensuring a design's accuracy.

Unit Four: Utility Networks and Data Management

- Designing utility networks.
- Working with gravity pipes and pressure pipes.
- Performing clash detection.
- Ensuring BIM collaboration.
- Using data shortcuts.
- Managing project data and version control.
- Producing plans and profile sheets.

Unit Five: Strategic Application and Future Trends

- Applying BIM principles.
- Workflow optimization.
- The future of Civil 3D technology.
- AI-driven design.
- Career pathways for civil professionals.
- Building a culture of innovation.
- The value of integrated design.

FAQ:

Qualifications required for registering to this course?

There are no requirements.

How long is each daily session, and what is the total number of training hours for the course?

This training course spans five days, with daily sessions ranging between 4 to 5 hours, including breaks and interactive activities, bringing the total duration to 20 - 25 training hours.

Something to think about:

How can a deeper understanding of Civil 3D for infrastructure projects and a proactive approach to BIM for infrastructure empower civil engineers to move beyond traditional methods and become strategic leaders in creating more efficient, sustainable, and innovative public works?

What unique qualities does this course offer compared to other courses?

This training course is unique because it provides a dedicated, strategic focus on Civil 3D for infrastructure projects. While other programs may cover general software use, our curriculum is designed to empower professionals with the specific skills needed to address the unique challenges of complex civil projects, from mastering site grading to designing a roadway corridor. The program is a hands-on experience, with exercises that directly simulate the challenges and decisions involved in a real-world infrastructure project. We go beyond theoretical concepts to provide a clear, actionable roadmap for balancing the demands of a complex project with the imperative of delivering a successful and well-documented outcome. This course is for professionals who want to lead their organizations toward a more efficient, profitable, and innovative future.
