Environmental Project Management for Sustainability Training Course

19 - 23 Oct 2026

Geneva

5900 € (Per Person)

Ref: #ENV4819_63676

Course Introduction / Overview:

This training course is designed to equip project managers and environmental professionals with the specialized skills needed to successfully lead environmental projects. As sustainability becomes a core objective for organizations across all sectors, the ability to manage projects that meet both environmental and business goals is critical. This program, offered by BIG BEN Training Center, provides a comprehensive framework that integrates standard project management principles with the unique challenges of environmental work, such as regulatory compliance, stakeholder engagement, and risk mitigation. The curriculum is informed by the work of respected academics like Dr. Annemarie H. van Weerdenburg, a leading authority on sustainable project management, whose research shows the importance of integrating environmental considerations into the very fabric of project planning. The course goes beyond the basics to address complex issues like life cycle assessment, green procurement, and measuring environmental impact. By providing a structured, systematic approach, we help participants ensure their projects are delivered on time and on budget while also making a positive environmental contribution. We prepare professionals to lead with confidence, transforming environmental objectives from abstract ideals into tangible, successful outcomes.

Target Audience / This training course is suitable for:

- Project managers and program directors.
- Environmental engineers and consultants.
- Sustainability and CSR managers.
- Operations and facility managers.
- Public sector officials working on environmental initiatives.
- Construction and infrastructure project leaders.
- Anyone responsible for planning and executing environmental projects.
- Government agencies and equivalents.

Target Sectors and Industries:

- Construction and real estate development.
- Environmental consulting and services.
- Government and public administration agencies.
- Energy and utilities.
- Manufacturing.
- Mining and natural resources.
- Urban planning and public works.
- Transportation and logistics.

Target Organizations Departments:

- Project management office (PMO).
- Environmental health and safety (EHS).
- Engineering and design.
- Corporate social responsibility (CSR).
- Operations.
- Planning and development.
- Compliance and legal.
- Procurement and supply chain.

Course Offerings:

By the end of this course, the participants will have able to:

- Plan, execute, and monitor environmental projects from initiation to closure.
- Integrate environmental compliance and sustainability goals into project plans.
- Conduct environmental risk and impact assessments.
- Manage project budgets and resources with a focus on sustainable practices.
- Effectively engage and communicate with diverse stakeholders.
- Apply best practices in green procurement and resource management.
- Measure and report on the environmental performance of a project.
- Lead project teams to achieve both business and environmental objectives.

Course Methodology:

This training course uses a project-based and case-study driven methodology to ensure participants gain practical skills they can apply immediately. We go beyond theoretical concepts by having participants work on a simulated environmental project from start to finish. This hands-on approach includes developing a project charter, creating a detailed work breakdown structure, and managing simulated risks. The curriculum incorporates collaborative workshops where participants can share their experiences and challenges, learning from both their peers and the instructor. We also use interactive exercises that focus on specific project management tools and techniques, all within an environmental context. BIG BEN Training Center is committed to providing a learning environment that is both challenging and supportive, helping participants build the confidence and competence needed to lead complex projects. Our methodology ensures that participants are ready to tackle real-world environmental project management challenges the moment they leave the course.

Course Agenda (Course Units):

Unit One: Foundations of Environmental Project Management

- Introduction to environmental project management.
- Integrating sustainability and project life cycles.
- Understanding project constraints and the iron triangle in an environmental context.
- Identifying project stakeholders and their interests.
- Developing a project charter.
- The role of the project manager as an environmental leader.
- Defining project scope and deliverables.

Unit Two: Planning for Environmental Projects

- Conducting a comprehensive environmental impact assessment.
- Setting project objectives, milestones, and KPIs.
- Creating a detailed work breakdown structure (WBS).
- Resource planning and budgeting with sustainability lens.
- Developing a project schedule and timeline.
- Risk identification and mitigation for environmental projects.
- Regulatory compliance planning.

Unit Three: Execution and Monitoring

- Leading and motivating an environmental project team.
- Managing communication and stakeholder expectations.
- Monitoring project progress against environmental goals.
- Quality assurance and control in environmental projects.
- Problem-solving and decision-making during execution.
- Green procurement and sustainable sourcing.
- Managing change requests.

Unit Four: Project Closure and Reporting

- The project closure process.
- Verifying project deliverables and achieving objectives.
- Performance evaluation of the project and the team.
- Creating a final project report.
- Communicating project outcomes and lessons learned.
- Formalizing post-project environmental monitoring.
- Celebrating success and recognizing contributions.

Unit Five: Strategic and Advanced Topics

- Advanced risk management techniques.
- Life cycle assessment (LCA) in project management.
- The role of technology in environmental projects.
- Building a business case for environmental projects.
- Scaling up successful projects.
- Career pathways for environmental project managers.
- Future trends in sustainable project management.

FAQ:

Qualifications required for registering to this course?

There are no requirements.

How long is each daily session, and what is the total number of training hours for the course?

This training course spans five days, with daily sessions ranging between 4 to 5 hours, including breaks and interactive activities, bringing the total duration to 20 - 25 training hours.

Something to think about:

How can a project manager effectively balance the traditional demands of a project (time, budget, scope) with the unique, and often long-term, environmental goals of a sustainable project?

What unique qualities does this course offer compared to other courses?

This training course stands out by providing a specialized and integrated approach that merges traditional project management with the critical demands of environmental sustainability. Unlike general project management programs, our curriculum is tailored to address the specific challenges and opportunities that arise when managing projects with a clear environmental mandate. We focus on the practical application of principles, using a project-based learning model that allows participants to build a portfolio of work and experience. The course goes beyond basic tools, emphasizing strategic thinking, stakeholder communication, and ethical decision-making. We prepare professionals to be more than just managers; we train them to be leaders who can navigate the complexities of environmental work and deliver results that benefit both their organization and the planet. This course is for those who want to be at the forefront of the green economy, turning environmental challenges into successful projects.
