Integrated Security Technology for Healthcare Facilities Training Course

07 - 11 Dec 2026

Boston

7500 € (Per Person)

Ref: #SM9369_3390

Course Introduction / Overview:

Healthcare facilities face a unique set of security challenges, from protecting patients and staff to safeguarding sensitive medical data and expensive equipment. This training course provides a comprehensive guide to using and integrating security technology to create a safe and secure environment. We will explore everything from advanced access control systems and video surveillance to cybersecurity protocols for protecting patient records. We will draw on the work of academic authors like Jack J. Maniscalco, whose book Hospital Security Handbook provides a framework for understanding the unique security needs of healthcare. The curriculum is designed to equip professionals with the knowledge to select, deploy, and manage security technology in a way that enhances safety without disrupting patient care. BIG BEN Training Center is committed to providing a program that moves beyond a simple list of tools and provides a strategic approach to security management. We will cover the essentials of regulatory compliance, including HIPAA, and how technology can help meet these requirements. By the end of this course, participants will be able to design and manage a security system that is both effective and efficient, ensuring the well-being of everyone within the facility.

Target Audience / This training course is suitable for:

- Healthcare security managers.
- Hospital administrators and operations directors.
- IT and cybersecurity professionals.
- Facilities managers.
- Clinical staff and nurse managers.
- Risk management and compliance officers.
- Senior executives in healthcare.

Target Sectors and Industries:

- Hospitals and medical centers.
- Clinics and outpatient facilities.
- Long-term care and nursing homes.
- Mental health and rehabilitation centers.
- Pharmaceutical companies.
- Health insurance providers.
- Government agencies and their equivalents.

Target Organizations Departments:

- Security and Loss Prevention.
- Information Technology (IT) and Cybersecurity.
- Facilities Management.
- Patient Services.
- Risk Management.
- Legal and Compliance.
- Human Resources.

Course Offerings:

By the end of this course, the participants will have able to:

- Conduct a security needs assessment for a healthcare facility.
- Design an integrated security system using modern technology.
- Use advanced access control and video surveillance systems.
- Protect patient data and electronic health records (EHRs) from cyber threats.
- Develop and manage an emergency communication and response system.
- Ensure security technology is compliant with HIPAA and other regulations.
- Train staff on using security technologies and protocols.
- Use technology to improve visitor management and patient tracking.

Course Methodology:

This training course uses a blend of instructional and hands-on methods to make sure the content is engaging and practical. We will start with instructor-led sessions to cover the core principles of healthcare security and the technology that supports it. A key part of the program involves case studies of real-world security incidents within healthcare. These examples help participants understand how security technology can prevent and respond to threats like patient abduction, workplace violence, and data breaches. We also use interactive workshops and group exercises where participants work together to design a security system for a mock hospital or clinic. This hands-on approach helps build confidence and technical skills. Instructors at BIG BEN Training Center are experienced professionals who provide continuous feedback to help refine each participant's knowledge and skills. Our goal is to prepare professionals to face the complex challenges of modern healthcare security. By focusing on practical, actionable knowledge, we are making sure that every participant leaves the course ready to use technology to create a safer environment.

Course Agenda (Course Units):

Unit One: The Foundation of Healthcare Security.

- Understanding the unique security challenges in healthcare.
- Integrating security technology into the patient care environment.
- Conducting a security risk assessment.
- The importance of policies and procedures.
- Fostering a security-conscious culture among staff.

Unit Two: Physical Security Technologies.

- Designing and implementing access control systems.
- The use of video surveillance and analytics.
- Alarm systems and emergency notification.
- Asset tracking and protection of medical equipment.
- Visitor management and patient tracking systems.

Unit Three: Cybersecurity and Data Protection.

- Protecting electronic health records (EHRs) and patient data.
- The basics of network security for medical devices.
- HIPAA and other data privacy regulations.
- Responding to cybersecurity incidents and data breaches.
- The human element in information security.

Unit Four: Emergency Preparedness and Response.

- Using technology for mass communication during an emergency.
- Designing an emergency response plan.
- The role of security technology during a crisis.
- Drills and simulations for various scenarios.
- Post-incident analysis and reporting.

Unit Five: The Future of Healthcare Security.

- The convergence of physical and cybersecurity.
- The use of AI and machine learning in security.
- Telehealth and remote patient monitoring security.
- The legal and ethical considerations of security technology.
- Creating a roadmap for technology adoption.

FAQ:

Qualifications required for registering to this course?

There are no requirements.

How long is each daily session, and what is the total number of training hours for the course?

This training course spans five days, with daily sessions ranging between 4 to 5 hours, including breaks and interactive activities, bringing the total duration to 20 - 25 training hours.

Something to think about:

How can a healthcare facility effectively use technology to enhance security and patient safety while also making sure that the technology is unobtrusive and does not disrupt the delicate balance of patient care and privacy?

What unique qualities does this course offer compared to other courses?

This training course is unique because it specifically addresses the integration of security technology within the healthcare environment, a field with its own complex challenges. While many security courses exist, they often don't address the unique concerns of healthcare, such as patient privacy, the movement of vulnerable people, and the need for a non-intrusive approach. Our program goes beyond a list of tools and provides a strategic framework for how to select, deploy, and manage security technology to enhance safety without compromising patient care. It combines both physical and cybersecurity, recognizing that threats to healthcare facilities come from all directions. The course uses a hands-on, case-study-based methodology, allowing participants to work through real-world scenarios and develop practical skills they can use right away. We also place a strong emphasis on regulatory compliance, which is critical in this highly regulated industry. BIG BEN Training Center is committed to providing a program that gives professionals the knowledge and skills to use technology to create a safer environment for patients, staff, and visitors.
